Project Description

Now we are entering the Digital Age. Everything we see is completely online with rapid technological advances. With the creation of gadgets/internet, it is easier for us to access the digital world. With an example, we want to convey our complaints about the state of the streets/aspirations. In the past, we wanted to convey messages/aspirations. Reporting still uses letters, it looks old-fashioned, doesn't it? that's why we made this monggo lapor application which makes it easier for customers to report and convey aspirations.
